

Prediction Market **AI Agent**

We're not just building technology —
we're architecting the **financial infrastructure** of tomorrow.

AI Agent Opportunity in Prediction Market

Prediction markets have evolved into a multi-billion dollar industry — yet they remain structurally fragmented. Platforms like Polymarket and Kalshi operate independently, with separate liquidity pools, different user bases, and no price synchronisation mechanism.

"Will Trump create a National Bitcoin Reserve in 2025?"

Polymarket: YES = 51¢

Kalshi: NO = 31¢

Combined YES + NO across platforms = \$0.82

Arbitrage profit: ~\$0.18 per \$1 deployed = ~18% return

Kalshi

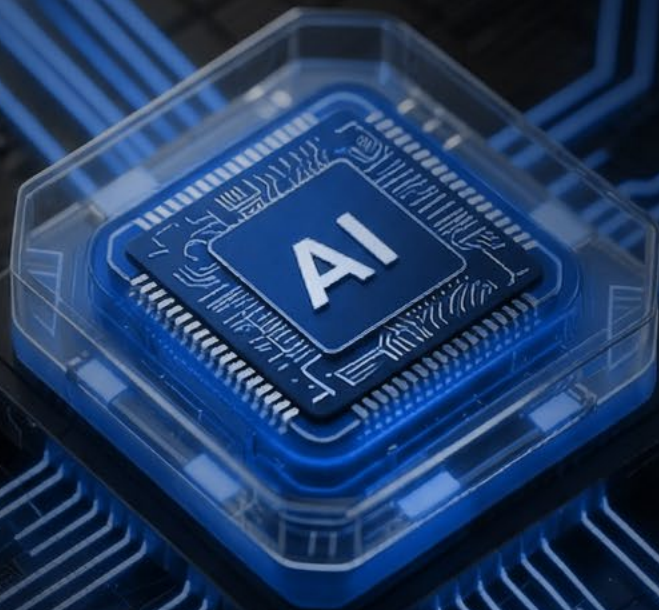

The gap is real. The opportunity exists. But without AI-powered automation, 99% of people will never capture it.

Orca was built to change that.

AI Agent

Trillion-Dollar Ready Market

Prediction markets have quietly grown into one of the fastest-moving financial sectors in the world, with Polymarket and Kalshi alone processing over \$44 billion in combined trading volume in 2025 — up from near zero just two years prior.

Key stats:

 Polymarket

\$3.6B+ wagered in the 2024 US Election alone

Kalshi

~\$1B monthly volume (2025)

CAGR

CAGR of 35–50% (2023–2025)

Bloomberg

Projected \$1 Trillion Market cap by 2030

Orca was built to the earliest stage of the most explosive financial market in Web3 history.

What if you have a Prediction Market Trading Bot **AI Agent ?**

 Polymarket Kalshi OPINION Limitless

Your Prediction Market AI Agent

Orca integrates cross-platform arbitrage, sentiment intelligence, and multi-strategy AI execution into a single unified framework — enabling assets to generate consistent returns, intelligent automation, and compounding growth across global prediction markets.

AI Driven

Advanced machine learning algorithms analyze market patterns in real-time to identify profitable arbitrage opportunities.

Fully Automated

Executes trades automatically 24/7 with zero manual intervention, maximizing efficiency and speed.

Signal-Strategy Predicted

Real-time sentiment layer meets intelligent execution — Orca reads the market before it moves.

Vision & Mission

Vision

To become the world's leading AI-powered prediction market AI Agent infrastructure — making intelligent, automated trading accessible to everyone.

Mission

To enable everyone to learn, utilize, and gain from the prediction market through AI automation — making intelligent automation accessible to all.

Transparency

Colorado Registration

Orca · Legal Compliance Status

Orca is officially incorporated in the State of Colorado, USA, operating under a recognized legal framework with a fully compliant corporate structure.

Entity	<i>Orca Node Limited</i>
Jurisdiction	<i>Colorado, United States</i>
Incorporation Date	<i>May 4, 2026</i>
Entity ID	<i>20261430725</i>

Legal Basis

Incorporated under the Colorado Revised Statutes (C.R.S.), ensuring full legal recognition and enforceability.

Compliance Assurance

Company structure, shareholder records, and corporate governance are legally established, transparent, and verifiable on official state records.

U.S. Securities and Exchange Commission

Orca has completed regulatory filings under the U.S. Securities framework, in accordance with applicable federal securities laws.

Entity	<i>Orca Node Limited</i>
CIK Number	<i>0002133924</i>
Filing Type	<i>Regulation D (Form D)</i>
Act	<i>Securities Act of 1933</i>

Regulatory Positioning

The company has submitted relevant filings through the SEC EDGAR system, ensuring transparency and compliance in capital-related activities.

Compliance Note

Regulation D filings represent a legally compliant disclosure process under U.S. securities laws, ensuring transparency in capital activities.

Smarter Trades. Automated Profits. Zero Complexity.

ORCA Appears on Binance Live

ORCA CEO Mr. Alex shared insights on Binance Live about ORCA AI Agent, the prediction market execution layer, and future ecosystem development, further showcasing ORCA's strategic direction for the next phase of the prediction market ecosystem.

**Powered by
OpenClaw**

OPENCLAW

OpenClaw is the open-source AI agent framework that makes Orca possible. It handles the automation backbone — connecting to platforms, executing actions, and running continuously without human input. Orca takes this powerful foundation and builds a complete, managed product on top of it — so anyone can benefit without touching a single line of code.

What OpenClaw Enables:

Autonomous AI Agent

connects to any platform via API and executes tasks continuously without human intervention

Skill Architecture

modular capability packs that give the agent specific powers: market monitoring, trade execution, risk management

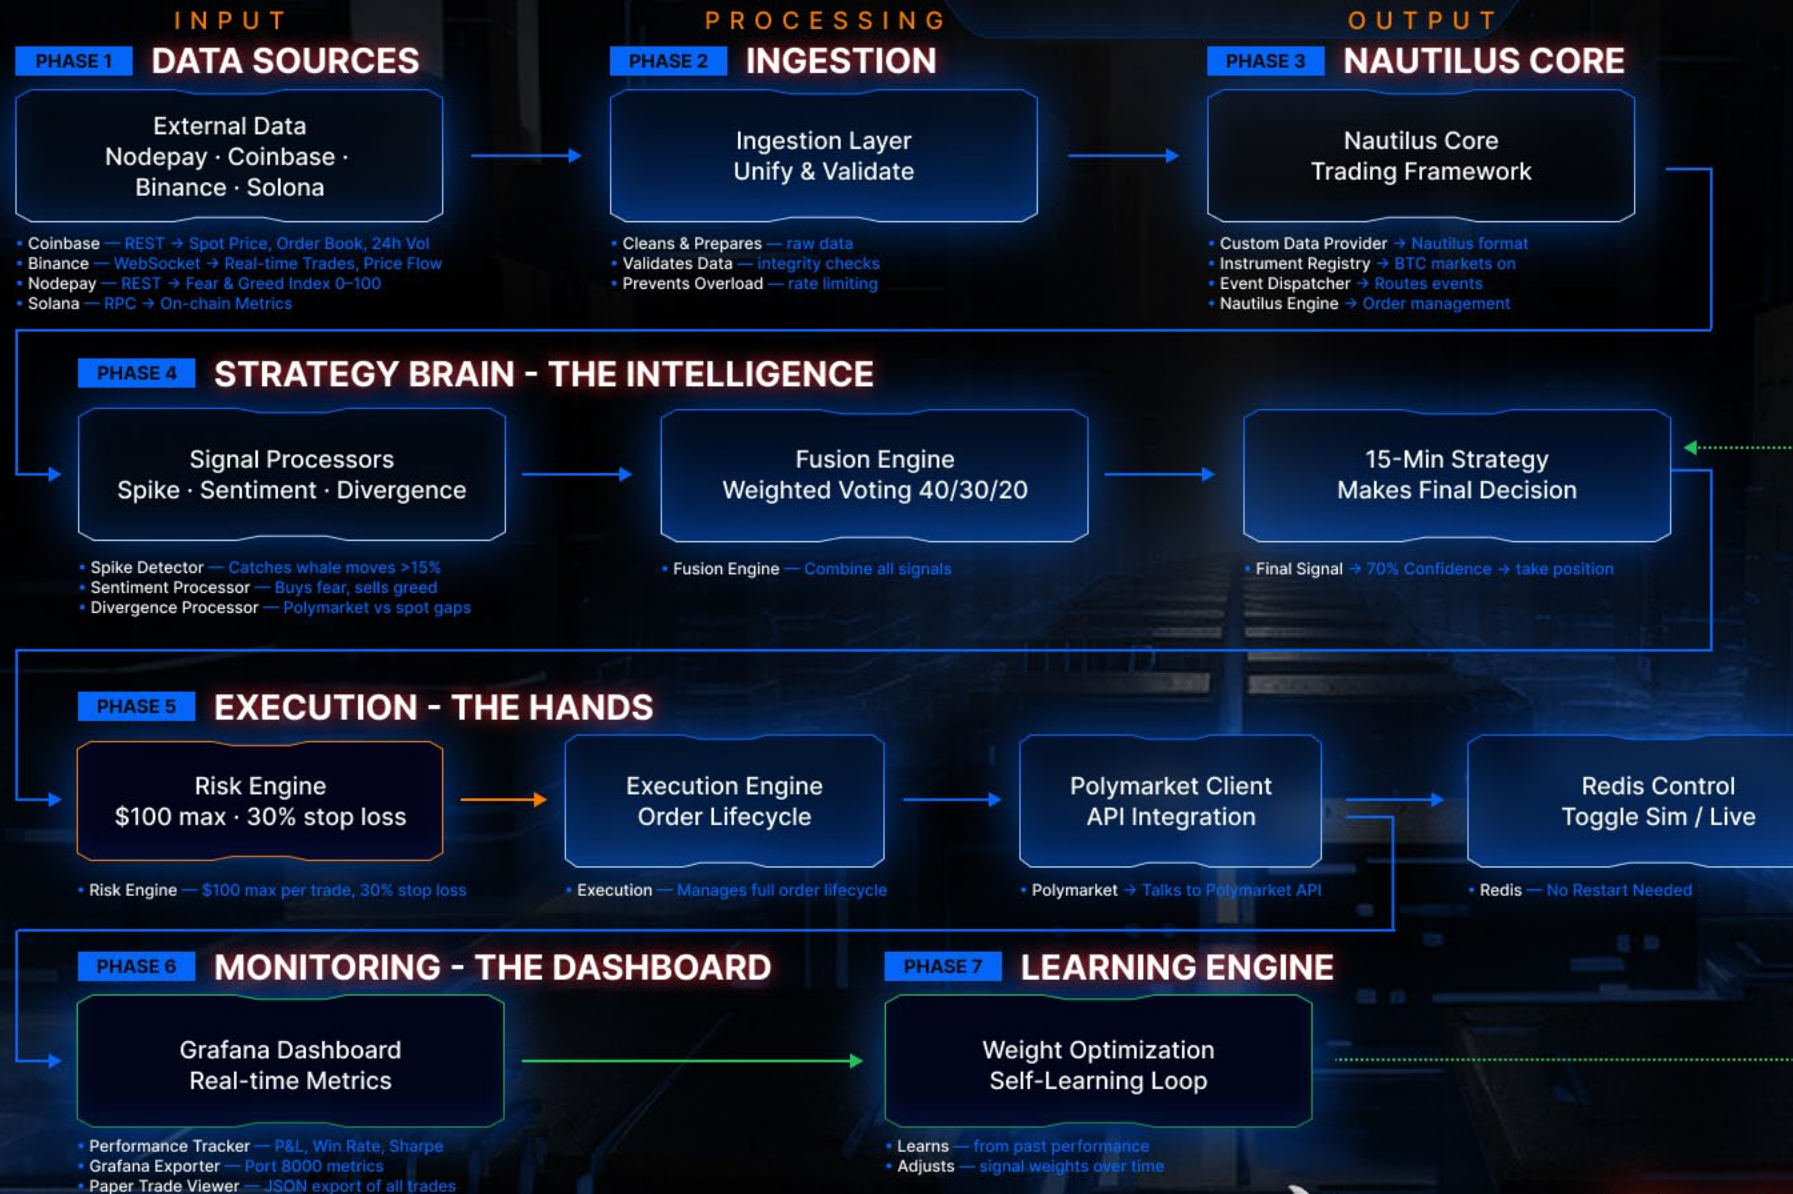

24/7 Operation

agents run round the clock, never sleep, never miss a signal

OpenClaw powers the engine. **Orca** puts it to work for you.

Who is using OpenClaw?

 OpenAI Bai du 百度 Tencent 腾讯 BINANCE Alibaba.com DingTalk shopify NVIDIA SentinelOne OKX BYBIT Bitget

Prediction Market BTC 15-Min

KEY FEATURES

- Multi-Phase Architecture — 7 intelligent phases
- Real-Time Intelligence — Price divergence, spike detection
- Risk-First Design — Built-in safeguards & testing
- Dual-Mode Operation — Sim (default) / Live toggle
- Grafana Monitoring — Comprehensive dashboards
- Self-Learning — Bot gets smarter over time
- Enterprise Error Handling — Auto-recovery
- Easy Configuration — Phase-by-phase setup

TRADING RESULTS

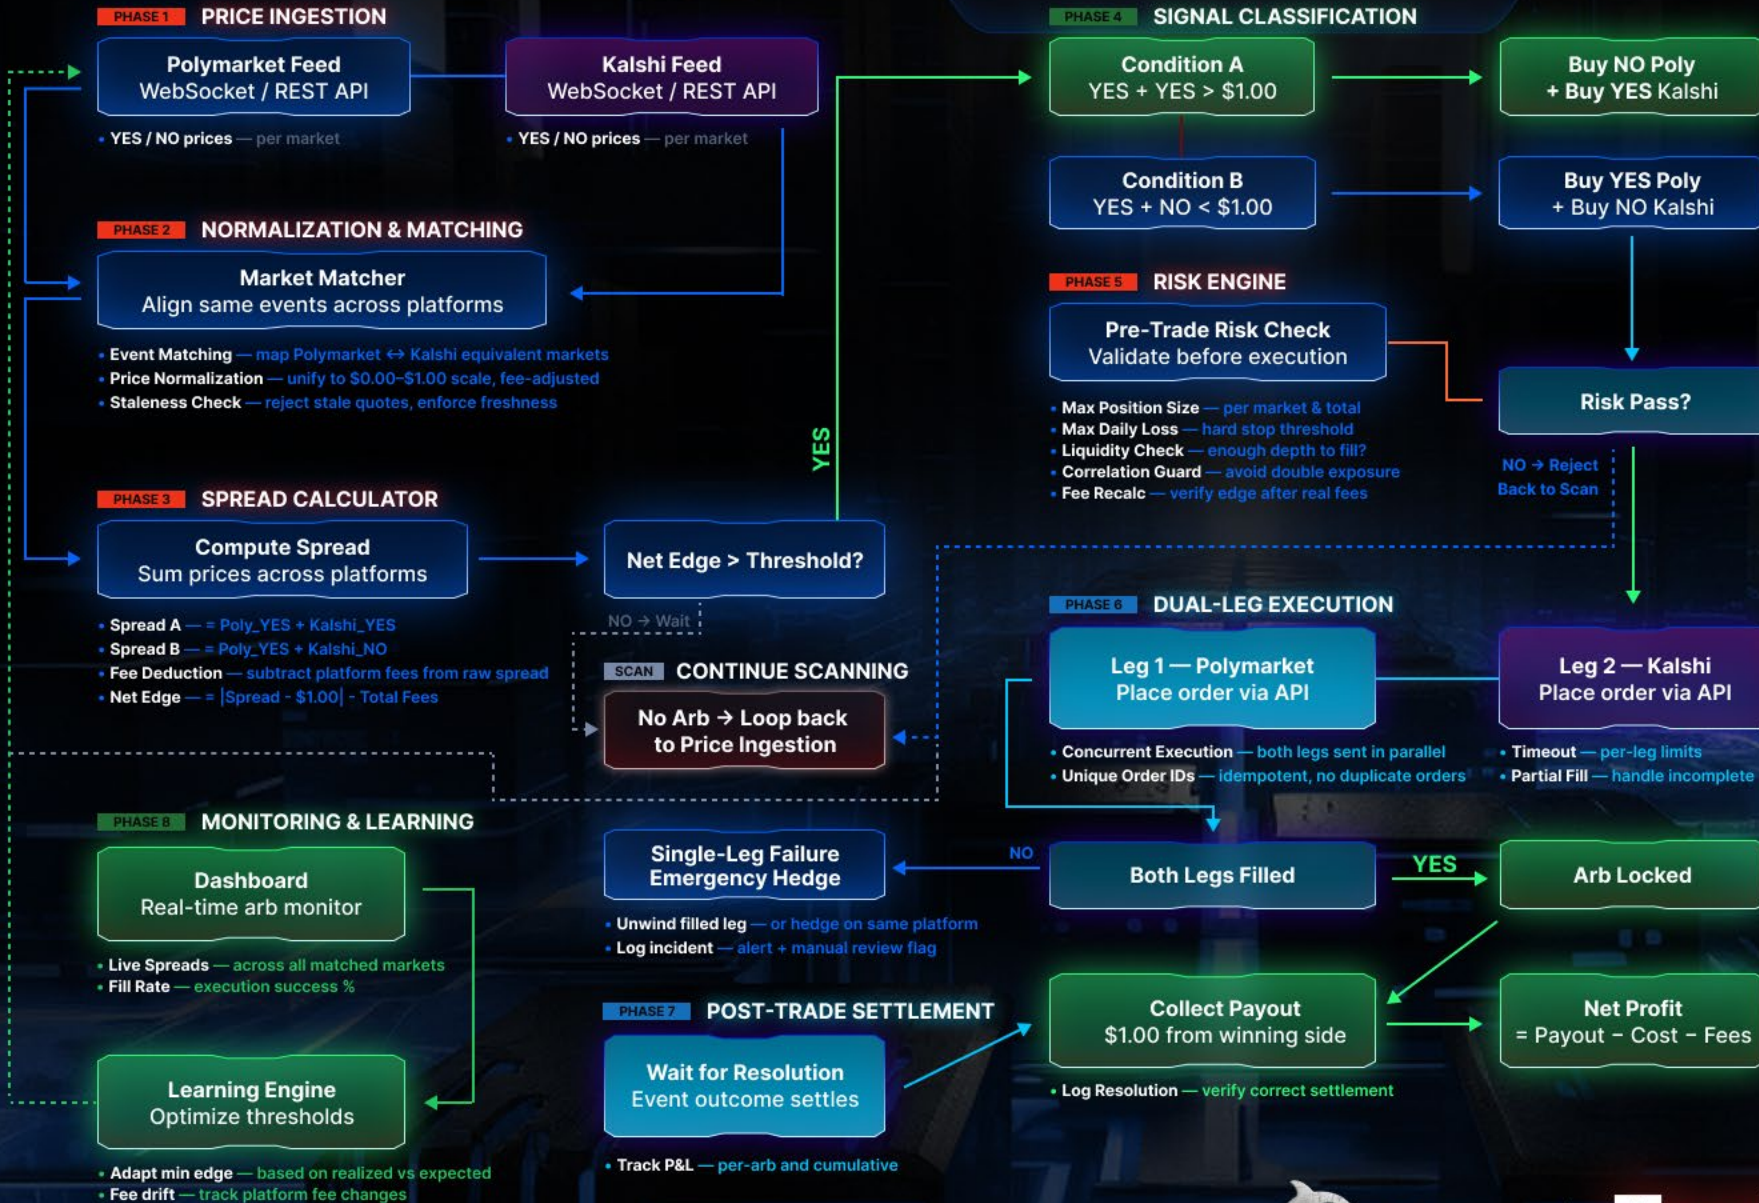

BTC SHORT-TERM PRICE DRIVERS

- Liquidity Conditions & Whale Activity
- Macro & Geopolitical Sentiment
- Structural Supply-Demand Imbalances
- Derivatives Positioning & Leverage

Technical Logic Flow

Cross-Platform Prediction Market Arbitrage

ARBITRAGE CONDITIONS

CONDITION A — YES + YES > \$1.00

Poly YES + Kalshi YES > \$1.00 Both platforms overprice
 YES → Buy NO on the overpriced market
 Buy YES on the underpriced market
 Spread > trading fees + slippage

CONDITION B — YES + NO < \$1.00

Poly YES + Kalshi NO < \$1.00 Cross mismatch = cheap coverage → Buy YES on Polymarket
 Buy NO on Kalshi
 Profit = \$1.00 - (YES price + NO price)

KEY RISKS & MITIGATIONS

- Execution Risk — Single-leg fill → emergency hedge
- Latency Risk — Spread gone before both legs fill
- Fee Changes — Recalc edge after real platform fees
- Liquidity Risk — Slippage on thin order books
- Settlement Risk — Platform dispute / delayed resolution
- API Downtime — Failover + circuit breaker per platform
- Regulatory — Kalshi = CFTC regulated, Polymarket = crypto

PROFIT MATH

CONDITION A EXAMPLE

Poly YES = \$0.58 → Poly NO = \$0.42
 Kalshi YES = \$0.55 → Kalshi NO = \$0.45

YES + YES = \$1.13 > \$1.00

Buy NO Poly = \$0.42
 Buy YES Kalshi = \$0.55
 Total Cost = \$0.97

Payout = \$1
 Profit = \$1.00 - \$0.97 = \$0.03 - fees

CONDITION B EXAMPLE

Poly YES = \$0.40
 Kalshi NO = \$0.52

YES + NO = \$0.92 < \$1.00

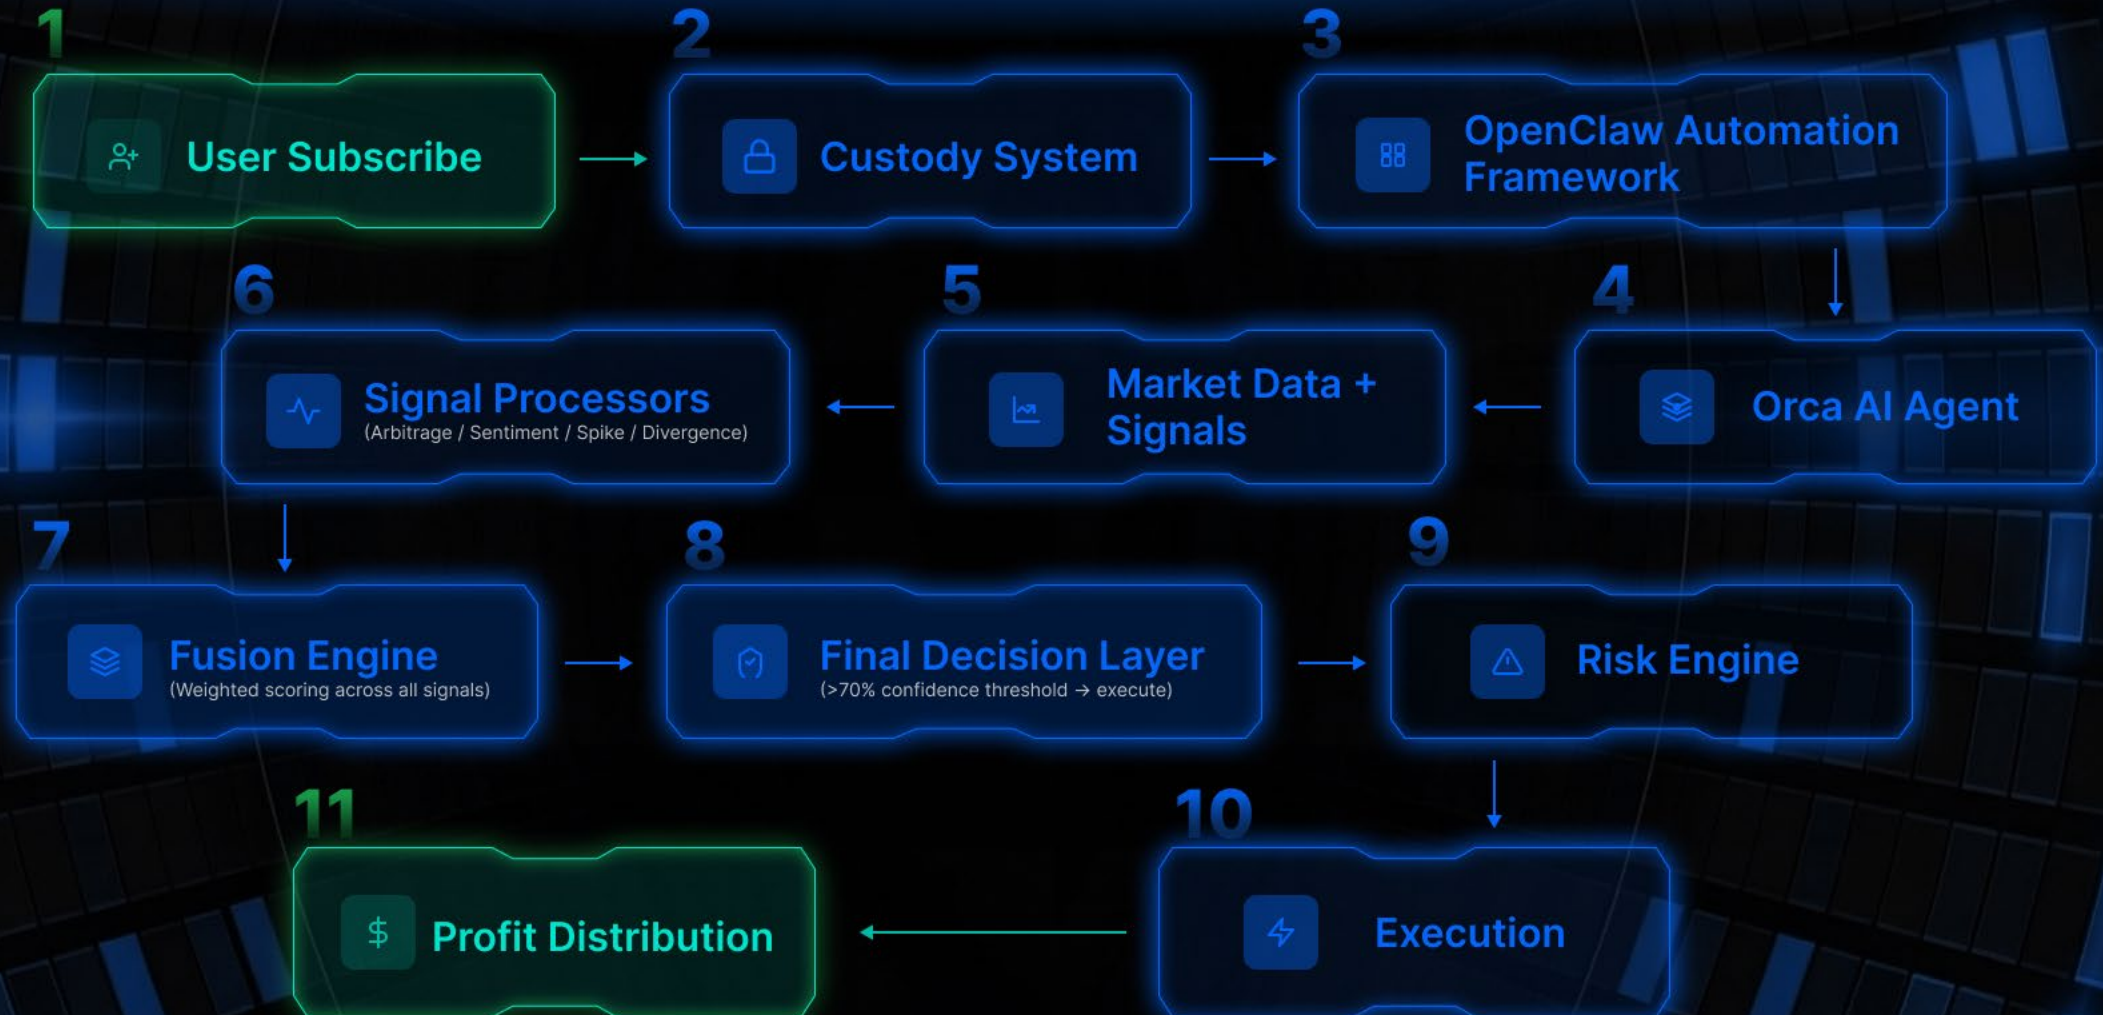

Buy YES Poly = \$0.40
 Buy NO Kalshi = \$0.52
 Total Cost = \$0.92

Payout = \$1
 Profit = \$1 - \$0.92 = \$0.08 - fees

Technical Logic Flow

How do Orca AI Agent works?

 ORCA

Strategy Suite

STRATEGY 1

CROSS-PLATFORM ARBITRAGE

Detects and captures price gaps between Polymarket and Kalshi on the same event. Pure spread capture — no directional risk.

OPPORTUNITY

The same event is priced differently across platforms due to separate liquidity pools, different user bases, and no synchronisation mechanism. Gaps of 3–14% appear regularly and are mathematically guaranteed profit when captured correctly.

TARGET

High-frequency, small-margin trades executed at scale.
Consistent daily compounding from hundreds of micro-captures.

STRATEGY 2

SENTIMENT & MOMENTUM TRADING

Monitors news flow, social signals, and market sentiment shifts. Buys underpriced outcomes before the crowd reacts. Sells overpriced ones before they correct.

OPPORTUNITY

Markets are slow to reprice after breaking news, viral social posts, or macro shifts. The gap between when information hits and when the market fully adjusts is a predictable, repeatable edge — especially in BTC 15-min contracts on Prediction market.

TARGET

Medium-frequency trades on high-conviction signals. Best suited for politically charged events, major crypto announcements, and sports outcomes.

 ORCA

Strategy Suite

STRATEGY 3

SPIKE DETECTION

Catches sudden whale moves and large-volume imbalances. When a market overreacts to a large trade, Orca steps in on the other side.

OPPORTUNITY

Large single trades temporarily distort YES/NO pricing in thin markets. Human traders panic-follow the spike. Orca identifies the overreaction and fades it — buying the overcorrected side before prices normalise. Most effective in BTC 15-min markets where emotional reactions are amplified.

TARGET

Short-duration, high-conviction counter-moves. Small position sizes with tight exit logic. Profits from mean reversion rather than trend following.

STRATEGY 4

PRICE DIVERGENCE TRADING

Identifies gaps between prediction market pricing and real-world data signals — weather APIs, on-chain metrics, economic indicators — and trades the mispricing.

OPPORTUNITY

Prediction market odds often lag behind real-world data updates. When a weather API updates its forecast, a central bank makes a statement, or on-chain BTC data shifts significantly — prediction market prices haven't caught up yet. That lag is pure edge.

TARGET

Precision trades on verifiable, data-backed mispricings. Highest confidence-per-trade ratio of all four strategies. Particularly powerful in weather, crypto price, and macro economic markets.

EDEN ONCHAIN AGENT

Daily Return: 0.2%~0.3% / Day
Period: 10 Days
Check-in Bonus: Extra 50%
Est. 0.30% ~ 0.45%/ Day

A zero-barrier entry point into AI-powered prediction market trading. Eden deploys simplified Cross-Platform Arbitrage logic across Polymarket and Kalshi, executing basic spread captures on the highest-confidence opportunities only. Built as a discovery package — experience how the Orca engine identifies, validates, and executes real arbitrage in real time. No prior knowledge required. Start small, see results, then scale.

ORACLE ONCHAIN AGENT

Daily Return: 0.3%~0.4% / Day
Period: 90 Days
Check-in Bonus: Extra 50%
Est. 0.45% ~ 0.60%/ Day

Designed for short cycles, fast feedback, and immediate market exposure. It deploys Cross-Platform Arbitrage logic across Polymarket and Kalshi, scanning for guaranteed spreads and executing trades before the window closes. Ideal for those who want to experience the AI Agent era firsthand with a low-commitment, high-frequency starting position.

AXIOM ONCHAIN AGENT

Daily Return: 0.4%~0.5% / Day
Period: 180 Days
Check-in Bonus: Extra 75%
Est. 0.70% ~ 0.875%/ Day

Designed for operates on a medium-term intelligence cycle, combining Sentiment & Momentum trading with Spike Detection to capture a wider range of market opportunities across multiple event categories. The agent builds pattern recognition across market cycles — improving signal accuracy and compounding returns as it accumulates more trading history. Built for participants who are ready to let AI work consistently on their behalf.

APEX ONCHAIN AGENT

Daily Return: 0.45%~0.6% / Day
Period: 360 Days
Check-in Bonus: Extra 100%
Est. 0.90% ~ 1.20%/ Day

A full-spectrum AI trading agent running Price Divergence, Arbitrage, and Momentum strategies simultaneously across a sustained period horizon. With access to deep compounding cycles and cross-signal fusion logic, APEX is engineered to maximise capital efficiency over time — turning patience and conviction into measurable, compounding returns. For those who understand that the greatest edge belongs to those who stay in the market longest.

AI Agent Performance

Why ORCA?

Orca provides users with a complete, fully managed solution — no need to deploy OpenClaw yourself or navigate complex automation workflows. Simply deposit and start participating in prediction market trading from day one.

UNLEASHED ROADMAP (2026-2027)

AI AGENTS

DECENTRALIZED
INFRASTRUCTURE

PREDICTION
MARKETS

UNIFIED
EXECUTION

2026 — Phase 1: AI Agent Launch

CORE: Deploy the Orca AI Agent suite (EDEN/ ORACLE / AXIOM / APEX) across prediction markets including [Polymarket](#) and [Kalshi](#).

Q1

- Infrastructure deployment and backend architecture setup
- Closed beta testing for ORACLE and AXIOM agents
- CrossArb engine initialization and execution testing
- Initial liquidity routing and risk framework establishment

Q2-Q3

- Public launch of AI Agent subscriptions
- Fusion execution engine activation
- Community onboarding and referral ranking system launch
- Ambassador and regional growth programs expansion
- Performance optimization based on live market conditions

Q4

- First ecosystem consolidation phase
- Security audit report release
- Expansion of agent trading strategies and predictive execution models
- Establish early institutional and whale user onboarding

GOAL

Registered Users: 150,000+ | Active Users: 10,000+ | AUM: \$260 Million

2027 — Phase 2: iORCA Token & Prediction Market

CORE: Launch the \$IORCA token economy and expand ecosystem participation through staking, governance, and platform utility.

Q1

- Official \$IORCA TGE and exchange listings
- Buyback and reward distribution mechanism activation
- Token-gated features and premium AI Agent access
- Expansion of global marketing and trading communities
- Governance framework development for ecosystem participants

Q2-Q3

- Launch of the ORCA Prediction Market beta infrastructure
- Ecosystem maturity and governance rollout
- Multi-tier staking and loyalty reward upgrades
- Expansion of institutional partnerships and strategic liquidity providers
- Strengthen treasury and ecosystem sustainability mechanisms

Q4

- Official launch of the ORCA Prediction Market ecosystem
- Native AI-powered prediction market trading and execution
- Expansion of institutional prediction market participation and API infrastructure

GOAL

Registered Users: 500,000+ | Active Users: 150,000+ | AUM: \$660 Million

ORCA FULL-SCALE UNLEASHED ROADMAP (2028-2029)

AI AGENTS

DECENTRALIZED
INFRASTRUCTURE

PREDICTION
MARKETS

UNIFIED
EXECUTION

2028 — Phase 3: Product Upgrade & Multi-Platform Expansion

CORE: Transform Orca into a mobile-first, AI-native prediction trading ecosystem with multi-platform execution and self-custody infrastructure.

Q1

- Mobile app beta release (iOS + Android)
- Integration of additional prediction market platforms
- Expansion of multi-agent orchestration capabilities
- Portfolio analytics and AI-assisted strategy management

- Public launch of the IORCA mobile application
- AI Agent wallet execution and direct onchain ordering system
- Multi-agent portfolio allocation and copy-agent functionality
- Cross-platform prediction market aggregation
- Expansion into cross-chain wallet support

- Agent SDK release for developers and advanced users
- API infrastructure for third-party integrations
- Enhanced automation and predictive allocation models
- Establish IORCA as a unified AI prediction trading terminal

GOAL

Registered Users: 1,200,000+ | Active Users: 300,000+ | AUM: \$1.2 Billion

2029 — Phase 4: OrcaMarket.ai

CORE: Launch **OrcaMarket.ai** — a unified AI-native prediction market layer aggregating global prediction markets into a single intelligent execution platform.

Vision

- Aggregate liquidity across all major prediction market platforms
- Enable anyone to deploy AI Agents across multiple markets simultaneously
- AI-native portfolio routing and autonomous market execution
- Unified market intelligence powered by collective signal analysis
- Open infrastructure for developers, institutions, and AI traders

Long-Term Direction

- Full AI-to-market execution infrastructure
- Cross-market liquidity aggregation
- Institutional prediction market infrastructure
- Autonomous AI trading ecosystem
- The Bloomberg Terminal for AI-powered prediction markets

GOAL

Registered Users: 10,000,000+ | Active Users: 500,000+

GOAL (AI AGENT METRICS)

Registered AI Agents: 50,000,000+ | Active AI Agents: 150,000+

Human AUM: \$10 Billion | AI Agent AUM: \$150 Million
